GUIDA ALLE NORMATIVE

Tutte le calzature del calzaturificio Garsport sono prodotte nel rispetto dei requisiti essenziali stabiliti dal Regolamento UE 2016/425. Le calzature possono essere conformi alla norma EN ISO 20345:2011, UNI EN ISO 20345:2012 o EN ISO 2345:2022 che stabiliscono le specifiche delle calzature di sicurezza con resistenza all'urto del puntale a 200 J. Essa definisce i requisiti di base del prodotto e quelli supplementari. Le calzature conformi a suddette norme definiscono anche le specifiche per calzature da lavoro EN ISO 20347:2012, UNI EN ISO 20347:2012 o EN ISO 20347:2022 ad uso professionale. I requisiti di base si possono così riassumere:

Classificazione calzatura	Requisito norma EN ISO 20345:2022		Requisito norma EN ISO 20346:2022		Requisito norma EN ISO 20347:2022	
	Categoria		Categoria		Categoria	
I o II	SB	Requisiti di base	PB	Requisiti di base	OB	Requisiti di base
I	S1	SB + zona del tallone chiusa + assorbimento di energia nella zona del tallone + calzatura antistatica	P1	PB + zona del tallone chiusa + assorbimento di energia nella zona del tallone + calzatura antistatica	O1	OB + zona del tallone chiusa + assorbimento di energia nella zona del tallone + calzatura antistatica
I	S2	S1 + assorbimento e penetrazione d'acqua del tomaio	P2	P1 + assorbimento e penetrazione d'acqua del tomaio	O2	O1 + assorbimento e penetrazione d'acqua del tomaio
I	S3	S2 + resistenza alla perforazione (con inserto antiperforazione metallico) + suola con rilievi	P3	P2 + resistenza alla perforazione (con inserto antiperforazione metallico) + suola con rilievi	O3	O2 + resistenza alla perforazione (con inserto antiperforazione metallico) + suola con rilievi
I	S3L	S2 + resistenza alla perforazione (con inserto antiperforazione non metallico tipo PL) + suola con rilievi	P3L	P2 + resistenza alla perforazione (con inserto antiperforazione non metallico tipo PL) + suola con rilievi	O3L	O2 + resistenza alla perforazione (con inserto antiperforazione non metallico tipo PL) + suola con rilievi
I	S3S	S2 + resistenza alla perforazione (con inserto antiperforazione non metallico tipo PS) + suola con rilievi	P3S	P2 + resistenza alla perforazione (con inserto antiperforazione non metallico tipo PS) + suola con rilievi	O3S	O2 + resistenza alla perforazione (con inserto antiperforazione non metallico tipo PS) + suola con rilievi
I	S6	S2 + resistenza all'acqua della calzatura completa	P6	P2 + resistenza all'acqua della calzatura completa	O6	O2 + resistenza all'acqua della calzatura completa
I	S7	S3 (inserto antiperforazione metallico) + resistenza all'acqua della calzatura completa	P7	P3 (inserto antiperforazione metallico) + resistenza all'acqua della calzatura completa	O7	O3 (inserto antiperforazione metallico) + resistenza all'acqua della calzatura completa
I	S7L	S3 (inserto antiperforazione non metallico tipo PL) + resistenza all'acqua della calzatura completa	P7L	P3 (inserto antiperforazione non metallico tipo PL) + resistenza all'acqua della calzatura completa	O7L	O3 (inserto antiperforazione non metallico tipo PL) + resistenza all'acqua della calzatura completa
I	S7S	S3 (inserto antiperforazione non metallico tipo PS) + resistenza all'acqua della calzatura completa	P7S	P3 (inserto antiperforazione non metallico tipo PS) + resistenza all'acqua della calzatura completa	O7S	O3 (inserto antiperforazione non metallico tipo PS) + resistenza all'acqua della calzatura completa

GUIDE TO THE NORMS

All Garsport footwear are produced according to the Regulation UE 2016/425.

Our footwear can comply with EN ISO 20345:2011 or UNI EN ISO 20345:2012 or EN ISO 2345:2022 norm that fix detailed lists of safety footwear with resistance of a steel toe cap at 200 J. It also fixes all the basic requirements of the products and the additional ones. Shoes that comply with the above mentioned norms, also define the standards for safety footwear EN ISO 20347:2012, UNI EN ISO 20347:2012 or EN ISO 20347:2022 for professional use.

The basic requirements can be summarized as follows:

Footwear classification	EN ISO 20345:2022 requirement		EN ISO 20346:2022 requirement		EN ISO 20347:2022 requirement	
	Category		Category		Category	
I or II	SB	Basic requirements	PB	Basic requirements	OB	Basic requirements
I	S1	SB + closed heel area + heel energy absorption + antistatic properties	P1	PB + closed heel area + heel energy absorption + antistatic properties	O1	OB + closed heel area + heel energy absorption + antistatic properties
I	S2	S1 + water absorption and penetration of upper	P2	P1 + water absorption and penetration of upper	O2	O1 + water absorption and penetration of upper
I	S3	S2 + perforation resistance (with metallic perforation resistant insert) + cleated outsole	P3	P2 + perforation resistance (with metallic perforation resistant insert) + cleated outsole	O3	O2 + perforation resistance (with metallic perforation resistant insert) + cleated outsole
I	S3L	S2 + perforation resistance (with non-metallic perforation resistant insert, PL type) + cleated outsole	P3L	P2 + perforation resistance (with non-metallic perforation resistant insert, PL type) + cleated outsole	O3L	O2 + perforation resistance (with non-metallic perforation resistant insert, PL type) + cleated outsole
I	S3S	S2 + perforation resistance (with non-metallic perforation resistant insert, PS type) + cleated outsole	P3S	P2 + perforation resistance (with non-metallic perforation resistant insert, PS type) + cleated outsole	O3S	O2 + perforation resistance (with non-metallic perforation resistant insert, PS type) + cleated outsole
I	S6	S2 + water resistance of whole shoe	P6	P2 + water resistance of whole shoe	O6	O2 + water resistance of whole shoe
I	S7	S3 (metallic perforation resistant insert) + water resistance of whole shoe	P7	P3 (metallic perforation resistant insert) + water resistance of whole shoe	O7	O3 (metallic perforation resistant insert) + water resistance of whole shoe
I	S7L	S3 (non-metallic perforation resistant insert, PL type) + water resistance of whole shoe	P7L	P3 (non-metallic perforation resistant insert, PL type) + water resistance of whole shoe	O7L	O3 (non-metallic perforation resistant insert, PL type) + water resistance of whole shoe
I	S7S	S3 (non-metallic perforation resistant insert, PS type) + water resistance of whole shoe	P7S	P3 (non-metallic perforation resistant, PS type) + water resistance of whole shoe	O7S	O3 (non-metallic perforation resistant insert, PS type) + water resistance of whole shoe

GUIDE AUX RÈGEMENTATIONS

Toutes les chaussures de sécurité produites par l'usine GARSPOINT sont fabriquées conformément aux exigences établies au règlement UE 2016/425. Les chaussures peuvent être conformes à la norme EN ISO 20345:2011, UNI EN ISO 20345:2012 ou EN ISO 20345:2022, qui établit les spécifications des chaussures de sécurité avec embout 200 J. Cette norme définit les caractéristiques obligatoires du produit et les exigences additionnelles. Les chaussures conformes à ces normes surnommées, définissent aussi les spécifications techniques pour les chaussures de travail EN ISO 20347:2012, EN ISO 20347:2012 ou EN ISO 20347:2022 à usage professionnel. Les conditions de base peuvent être résumées de la façon suivante:

Classification chaussure	Exigence norme 20345:2022		Exigence norme 20346:2022		Exigence norme 20347:2022	
	Catégorie		Catégorie		Catégorie	
I ou II	SB	Exigences de base	PB	Exigences de base	OB	Exigences de base
I	S1	SB + talon fermé + absorption d'énergie dans la zone du talon + chaussure antistatique	P1	SB + talon fermé + absorption d'énergie dans la zone du talon + chaussure antistatique	O1	OB + talon fermé + absorption d'énergie dans la zone du talon + chaussure antistatique
I	S2	S1 + absorption et pénétration d'eau de la empeigne	P2	S1 + absorption et pénétration d'eau de la empeigne	O2	O1 + absorption et pénétration d'eau de la empeigne

LINEA HEXALIGHT

Grazie al know-how acquisito negli oltre 50 anni di esperienza produttiva, e dopo approfonditi studi e ricerche, Garsport realizza la nuova linea Hexalight, un eccellente sistema che permette di avere un comfort ed una leggerezza senza precedenti, riuscendo a sfruttare le caratteristiche fisiche del poliuretano, unite a quelle della fisica. La nuova suola Hexalight infatti rappresenta un nuovo modo di concepire la leggerezza ed il comfort delle calzature. Il battistrada è realizzato attraverso l'iniezione diretta su tomaia di poliuretano bi-densità. Il battistrada in poliuretano compatto garantisce un grip eccellente ed è sviluppato per assecondare e superare brillantemente i nuovi test imposti dalla normativa 20345:2022. Ma è l'intersuola, in poliuretano espanso, leggero e a bassa densità, a rappresentare l'innovazione principale. Grazie ai fori aperti posti nella zona del tallone, la calzatura acquisisce ulteriore leggerezza e ammortizzazione durante l'utilizzo. I fori, di forma conica, sfruttano i principi della fisica e consentono di dare struttura alla calzatura, dando inoltre la possibilità ad eventuali residui o detriti di materiale di poter essere scaricati verso l'esterno, qualora la calzatura venga utilizzata in ambienti esterni. La nuova suola Hexalight, oltre che ad essere innovativa e performante, ha anche un occhio di riguardo in termini di ecosostenibilità e rispetto verso l'ambiente: grazie alla sua struttura riduce lo spreco e l'utilizzo del materiale poliuretano in fase di iniezione. La linea Hexalight si comporrà di vari nuovi modelli, a taglio Mid, Low, in S1p/S3 ESD, per assicurare la scelta del modello più idoneo alle esigenze del consumatore finale.

Garsport presents the new Hexalight line, the result of more than 50 years of production experience and extensive research. It is an innovative system that offers unrivaled comfort and lightness, thanks to the optimal use of the physical properties of polyurethane. The new Hexalight sole stands out for its original and high-performance design. The outsole is made through the direct injection of bi-density polyurethane. The compact polyurethane tread guarantees an excellent grip and brilliantly meets the requirements of EN ISO 20345:2022 standard. The midsole, however, is the main innovation. Made of lightweight, low-density expanded polyurethane, it features open holes in the heel area, which ensure more lightness and cushioning during use. The conical-shaped holes exploit the principles of physics and help to reinforce the structure of the shoe, while facilitating the evacuation of any residue or material debris case of outdoor use. The new Hexalight sole is also environmentally friendly: its structure reduces waste and dissipation of polyurethane material during the injection phase. The Hexalight range includes several new models, Mid, Low cut, in S1p/S3 ESD, to adapt to the needs of the end consumer.

Garsport présente la nouvelle ligne Hexalight, le résultat de plus de 50 ans d'expérience en production et de recherches approfondies. Il s'agit d'un système innovant qui offre un confort et une légèreté inégalés, grâce à l'utilisation optimale des propriétés physiques du polyuréthane. La nouvelle semelle Hexalight se distingue par sa conception originale et performante. La semelle extérieure est fabriquée par injection directe de polyuréthane double densité. La bande de roulement compacte en polyuréthane assure une excellente adhérence et répond aux exigences du règlement 20345:2022. La semelle intermédiaire, en polyuréthane expansé léger et à faible densité, est la principale innovation. Elle comporte des trous ouverts dans la zone du talon, qui confèrent à la chaussure plus de légèreté et d'amorti pendant l'utilisation. Les trous, de forme conique, exploitent les principes de la physique et permettent de renforcer la structure de la chaussure, tout en facilitant l'évacuation des éventuels résidus ou débris de matériau en cas d'utilisation en plein air. La nouvelle semelle Hexalight est également respectueuse de l'environnement : sa structure réduit les déchets et le gaspillage du matériau polyuréthane lors de la phase d'injection. La gamme Hexalight comprend plusieurs nouveaux modèles, Mid, Low cut, en S1p/S3 ESD, pour s'adapter aux besoins du consommateur final.

SAFE OUTDOOR

 Quando l'Outdoor diventa sicuro. Questo è sicuramente lo slogan che più si addice a questa linea Safety. Queste calzature nascono come scarpe da alta montagna, estremamente tecniche, con fodera interna impermeabile e traspirante, suola Vibram con inserto posteriore per l'attacco del rampone semi-automatico, e sottopiede di montaggio in nylon rigido, ma sono state declinate anche come prodotti di sicurezza, grazie all'introduzione del puntale antischiacciamento in alluminio e della lamina anti-perforazione in composito. Ideale per tutti gli operatori che operano in condizioni difficili e ad alta quota e necessitano di un prodotto sicuro che rispetti gli standard richiesti, con tutte le caratteristiche normalmente necessarie per il mondo della montagna.

 *When Outdoor becomes safe! This is the claim which fits better for the new Safety line. This new products born as mountaineer boots, extremely technical, lined with waterproof/breathable material, and cemented with Vibram outsole with back insert for the semi-automatic crampon attachment and a stiffer lasting board, but they have also been developed as safety products, thanks to the introduction of an aluminum toe cap, and a composite anti-perforation last. This boot is the ideal solution for all the operators who work and deal every day with high altitude and difficult mountain conditions, and need a safety product which respects the normative standards, with all the necessary key features normally required for mountaineering.*

 *Quand l'Outdoor devient Sécurité! C'est le slogan choisi par Garsport pour décrire au mieux le nouveau ligne Safety. À partir des chaussures de haute montagne, réservées aux Alpinistes chevronés, aux techniques les plus extrêmes, doublure interne imperméable et transpirante, semelle Vibram avec attache postérieure semi-automatique pour les crampons, semelle intérieure de propreté en nylon rigide, innovation avec une coque à embout en aluminium et une semelle anti-perforation composite. Le must pour les professionnels les plus avertis qui opèrent en haute montagne dans des conditions extrêmes et difficiles, qui ont besoin d'un produit respectant les standards exigés et toutes les caractéristiques en termes de sécurité et de réglementation.*

ARROW SOLES BY MICHELIN

 Nuova linea esclusiva presentata da Garsport per il 2022, che si caratterizza per il nuovo fondo Michelin Arrow, dal design accattivante, studiato anche per un grip ottimale anche in situazioni di lavoro in ambienti esterni e su terreni difficili. La nuova linea ARROW – Soles by Michelin è sviluppata con un'eccezionale ed esclusiva suola a tre densità iniettata direttamente su tomaia. Realizzata con la tecnologia PLUS2 (brevetto STEMMA Srl) e l'impiego del battistrada in gomma Michelin il nuovo prodotto è apprezzabile sia per il design accattivante che per le performances tecniche. Grazie infatti alla combinazione di 3 materiali a diverse densità, la suola garantisce elevata resistenza allo scivolamento, confort e assoluta stabilità. Vengono così enfatizzate:

- > La versatilità produttiva, che permette di ampliare la gamma di prodotti realizzabili mediante iniezione diretta con sempre nuove soluzioni tecniche di prodotto.
- > L'elevata efficienza, che consente di produrre calzature con suola a 3 densità mantenendo lo stesso ritmo produttivo di un tradizionale processo bi-densità.
- > L'assoluta flessibilità, che permette di combinare le tradizionali produzioni in bi-densità con quella dei nuovi modelli a 3-densità, senza dover modificare la configurazione dell'impianto.

 *The new Pyramid sole by Garsport is a vulcanized rubber sole with a low density polyurethane midsole (PULL 38) and a compact thermoplastic film coating designed to resist impact and abrasion. Garsport introduces a new exclusive line for 2022, which is characterized by the new Michelin Arrow bottom stock. Featuring a modern and appealing design, this new outsole has been developed to be especially suitable for outdoor work and to have an excellent grip even on the roughest ground. This new line Arrow – Soles powered by Michelin is endowed with a unique tri-density outsole injected directly on the upper. Made with PLUS2 technology by STEMMA Srl and equipped with Michelin's famous rubber tread, this new product combines an attractive design with top level technical performances. In fact, combining three different density materials this outsole ensures high slip resistance, great comfort and full steadiness. The following features are then enhanced:*

- > *Production versatility, widening the range of products made through direct injection, offering this way always new technical solutions.*
- > *High efficiency, manufacturing tri-density outsole footwear at the same rhythm of the usual bi-density process.*
- > *Full flexibility, combining the production of classic bi-density models with new tri-density ones, without changing the existing system configuration.*

 *Nouvelle ligne exclusive présentée par Garsport pour le 2022, qui se caractérise par le nouveau fond Michelin Arrow, avec un design attrayant, également conçu pour une adhérence optimale même dans des situations de travail à l'extérieur et sur des terrains difficiles. La nouvelle ligne ARROW - Soles by Michelin est développée avec une semelle tridimensionnelle exceptionnelle et exclusive injectée directement sur la tige. Fabriqué avec la technologie PLUS2 (brevet STEMMA Srl) et l'utilisation de la bande de roulement en caoutchouc Michelin, le nouveau produit est apprécié à la fois pour son design attrayant et pour ses performances techniques. Grâce à la combinaison de 3 matériaux de densités différentes, la semelle garantit une grande résistance au glissement, confort et une stabilité absolue. Les points suivants sont donc très importants :*

- > *La polyvalence de production, qui permet d'élargir la gamme de produits avec injection directe avec des solutions techniques toujours nouvelles*
- > *La haute efficacité, qui vous permet de produire des chaussures à semelle 3 densités tout en conservant le même rythme de production qu'un procédé bi-densité traditionnel*
- > *La flexibilité absolue, qui vous permet de combiner la production bi-densité traditionnelle avec celle des nouveaux modèles 3-densité, sans avoir à changer la configuration du système.*

ARROW SOLES BY MICHELIN

MICHELIN TECHNICAL OUTSOLES

Leggerezza, comfort, alte performance... Sono questi gli aspetti chiave che uniscono Garsport alle nuove soles tecniche a marchio MICHELIN®, nella creazione di una nuova linea di calzature di sicurezza. Il risultato è la nuova linea Garsport Heritage, powered by MICHELIN® Technical Soles, che presenta diversi modelli dal design esclusivo, con la combinazione di materiali tecnici, e certificati S1PS ed S3S a seconda delle condizioni di impiego e delle esigenze del consumatore finale. Tutto basato sulla nuova suola MICHELIN® Heritage, sviluppata in esclusiva per Garsport, con un'intersuola in eva, che si contraddistingue per l'estrema leggerezza e per l'eccellente resistenza allo scivolamento, e che grazie alle proprietà di antistaticità, resistenza al calore (HRO) e agli olii/acidi, la rendono completa e valida per molteplici tipologie di utilizzo.

Lightweight, comfort, high performance... These are the key elements which combine Garsport and MICHELIN®-branded technical sole, with the unique development of this new safety footwear range. The result is the new Garsport Heritage line powered by MICHELIN® Technical Soles, which presents different styles created with an exclusive design, the combination of technical and high quality materials, and certified S1p and S3 depending on the use conditions and the needs of the final customer. All this is based on the brand new MICHELIN® Heritage outsole, developed exclusively for Garsport, with an eva midsole, which stands for the extreme lightness and the excellent slip resistance, and thanks to the anti-static compound, the oil/acid and heat (HRO) resistance, becomes a complete and valid solution for all the multiple conditions of use.

Légèreté, confort, haute performance ... Ce sont les principaux aspects qui unissent Garsport aux nouvelles semelles techniques MICHELIN®, dans la création d'une nouvelle ligne de chaussures de sécurité. Le résultat est une nouvelle ligne Garsport Heritage, powered by MICHELIN® Technical Soles, qui présente des différents modèles avec un design unique, avec la combinaison de matériaux techniques et certifiés S1P et S3 en fonction des conditions d'emploi et des besoins du consommateur final. Tout repose sur la nouvelle semelle MICHELIN® Heritage, développée exclusivement pour Garsport, avec semelle intermédiaire EVA, qui se caractérise par son extrême légèreté et une excellente résistance au glissement, et qui grâce à ses propriétés antistatiques, à la résistance à la chaleur (HRO) et aux huiles / acides, la rendent complète et valide pour plusieurs types d'utilisations.

FULL PROTECTION LINE

Con la sua tecnologia brevettata, la nuovissima linea Full Protection by Garsport risolve definitivamente il problema del comfort e dell'usura della calzatura nella zona della punta, in particolar modo negli ambienti e condizioni di utilizzo dove lo sfregamento e l'usura dei materiali sono molto elevati.

Grazie alla particolare costruzione, il comfort e la flessibilità sono eccezionali: all'utilizzatore sembrerà di NON AVERE IL PUNTALE DI PROTEZIONE, potendo quindi beneficiare di una comodità paragonabile ad una calzatura da tempo libero.

Inoltre, la superficie di rivestimento in PU nella zona della punta, massimizza la durata della calzatura e la sua resistenza all'abrasione ed agli agenti esterni.

The brand new full protection line by Garsport, with its patented technology, focuses on comfort in the toe area, where materials are subjected to intensive contact and abrasion.

Thanks to its particular construction, comfort and shoe flexibility are simply exceptional: the end user will feel like WEARING A SHOE WITHOUT PROTECTION TOE CAP, taking the benefit of having the same comfort comparable to everyday freetime shoes.

Furthermore, the PU coating surface on the toe area, allows a better shoe durability, and an improved resistance to external agents and abrasion.

Avec sa technologie brevetée, la toute nouvelle ligne Full Protection de Garsport résout définitivement le problème du confort et de l'usure de la chaussure dans la zone des orteils, en particulier dans les environnements et conditions d'utilisation où le frottement et l'usure des matériaux est très élevée.

Grâce à sa particulière construction, le confort et la flexibilité sont exceptionnels: à l'utilisateur il semblera de n'avoir aucun embout, ce qui lui permettra de bénéficier d'un confort comparable à une chaussure pour le temps libre.

En plus, la surface de revêtement en PU dans la zone des orteils, maximise la durabilité de la chaussure et la résistance à l'abrasion et aux agents externes.

PYRAMID

La nuova suola Pyramid by Garsport è in gomma vulcanizzata con una zeppa in poliuretano a bassa densità (PULL 38), ed un rivestimento in film termoplastico compatto e progettato per resistere agli urti e alle abrasioni.

Questa nuova tecnologia è stata pensata tenendo in considerazione le performance che una calzatura tecnica da lavoro deve avere, ed è per questo che è stato scelto il Poliestere idoneo al settore antinfortunistico, in modo da fornire una struttura molto più solida.

Grazie ad una attenta formulazione e all'utilizzo di materie prime Premium, si è riusciti a raggiungere un peso specifico molto basso con delle caratteristiche di comfort, rebound e compression set ottimali per le calzature più innovative dei prossimi decenni.

The new Pyramid sole by Garsport is a vulcanized rubber sole with a low density polyurethane midsole (PULL 38) and a compact thermoplastic film coating designed to resist impact and abrasion.

This new technology has been conceived according to the technical features that a safety shoe must have. POLYESTER has been chosen, as its nature is in line with the accident prevention environment, and it provides much more solid structure than polyether.z

Thanks to a careful formulation and the use of Premium raw materials, it has been possible to achieve a very low specific weight with optimal comfort, rebound and compression set characteristics for an innovative next decades' footwear.

La nouvelle semelle Pyramide de Garsport est fabriquée à base de caoutchouc vulcanisé avec une semelle intermédiaire en polyuréthane basse densité (PULL 38) et un revêtement en film thermoplastique compact conçu pour résister aux chocs et à l'abrasion.

Cette nouvelle technologie a été conçue en considérant les performances qu'une chaussure de haute technologie doit avoir pour être efficace. C'est la raison pour laquelle le « POLYESTHER » a été choisi, car sa nature est conforme à l'environnement de prévention des accidents, car il fournit une structure beaucoup plus solide.

Grâce à une formulation soignée et à l'utilisation de matières premières « Premium », il a été possible d'atteindre un poids spécifique très faible avec un confort optimal, des caractéristiques d'amortissement des chocs et de compression pour une chaussure innovante sur les prochaines décennies.

HEAVY DUTY LINE

Linea di calzature pensata per i lavori più duri, in ambienti particolarmente difficili ed in diverse condizioni atmosferiche, anche fredde. La struttura di questi prodotti è priva di eccessive cuciture, in modo da garantire il massimo del comfort e della durata delle tomaie. La linea Heavy Duty si compone in diversi modelli con speciali puntali in alluminio, acciaio e composito, e lamine anti-perforazione in composito. Le soles in gomma nitrile resistono anche alle elevate temperature, ed offrono un elevato grado di aderenza anche sui fondi più difficili e scivolosi.

Safety footwear line developed for the toughest works, in particularly difficult environment and with different weather conditions, even if extreme cold. The structure of these products is made with very few stitchings, in order to ensure maximum comfort and upper durability.

Heavy Duty Line is composed by several styles with different special TOE CAPs in alluminium, steel and composite, with composite anti-perforation lasts. The nitril rubber outsoles resist to the highest temperatures, and offer an optimal grip even on the most difficult and slippery surfaces.

Ligne de chaussure conçue pour les travaux les plus durs dans des environnements particulièrement difficiles et dans des différentes conditions météorologiques, même de froid intense. La structure de ces produits est dépourvue de surpiqûres de manière à assurer le maximum du confort et aussi la durée des tiges. La ligne Heavy Duty est composée de différents modèles avec des embouts spéciaux en aluminium, acier et composite et des lames anti-pérforation en composite. Les semelles en caoutchouc nitrile résistent aux plus hautes températures et offrent un coefficient d'adhérence très élevé aussi bien sur des superficies difficiles et glissantes.
